Finite-connectivity coefficient of the fold (largest system size per point, 95% CI over seeds)
p = 1
p = 2
k × (fold ÷ all-to-all fold − 1)
neighbours per node, k
16
24
32
48
Rician closure, (p+2)/2 = 1.50
theory, undirected, k to infinity = 1.65
theory, undirected, reaction term at each k
theory, directed = 0.54
undirected (simulation)
directed (simulation)
Rician closure, (p+2)/2 = 2.00
theory, undirected, k to infinity = 2.37
theory, undirected, reaction term at each k
theory, directed = 0.88
undirected (simulation)
directed (simulation)
